PROFILE SUMMARY

Analytically driven MSc Applied Data Science graduate (Distinction, 88%) with hands-on experience in financial data analysis, commercial insight generation, competitor research, and stakeholder communication. Proven ability to analyse complex datasets, identify client needs and market opportunities, and present well-reasoned findings clearly to varied audiences. Proficient in Excel, Python, and SQL, with strong organisational skills, a proactive approach to problem-solving, and a genuine curiosity for the technology and innovation landscape. A fast learner who thrives both independently and in collaborative teams. Eager to contribute to HSBC Innovation Banking's Associate Development Program and bring analytical depth and commercial awareness to the Commercial Organisation.

SKILLS

Banking Analytics	Client need identification, product performance analysis, competitor research, market insight, commercial proposition development, innovation ecosystem awareness
Data Analysis & Reporting	Financial data analysis, KPI monitoring, trend identification, EDA, structured insight reporting, stakeholder-facing outputs
Tools & Software	Excel, Python, SQL, R, PowerPoint, Git
Visualisation & Communication	Dashboard development, clear written and verbal communication, complex topic simplification, Matplotlib Plotly, Seaborn
Soft Skills	Curious, driven, organised, proactive, calm under pressure, independent and collaborative, fast learner, creative problem-solver

WORK EXPERIENCE

Commercial Data Analyst (Intern) | KBZ Bank *Jun 2023 – Oct 2023*

- Performed financial data analysis on large datasets using Python and SQL to identify client performance trends, assess product usage, and deliver clear, well-reasoned insights to senior stakeholders which informed decisions across 3 business units.
- Built KPI and product performance dashboards that reduced reporting turnaround by 40% for the teams to monitor key commercial metrics and identify risks or opportunities with confidence.
- Conducted competitor research and market analysis to support commercial proposition development and presented structured findings to leadership on a weekly basis.
- Automated data pipelines for cleaning, validation, and transformation which eliminated over 6 hours of weekly manual processing and improved data accuracy across all commercial reporting outputs.
- Communicated complex analytical findings clearly to non-technical stakeholders to consistently translate data into straightforward, actionable conclusions.

eCommerce Data & Operations Analyst | Bee E-commerce *Mar 2021 – Jun 2022*

- Analysed client and product performance data using Excel (pivot tables, VLOOKUP, macros) and Python, to identify commercial trends and opportunities which drove a 15% improvement in operational efficiency.
- Researched market and competitor activity to support go-to-market decisions, and presented structured findings and strategic recommendations to management.
- Maintained and validated large commercial datasets with rigorous quality checks for data integrity for client-facing and internal reporting.
- Prepared clear, well-structured performance reports and presentations that communicated insights simply and effectively to non-technical business stakeholders.

Commercial Research & Client Coordinator | AungYadanar Jewellery Shop *Jan 2020 – Feb 2021*

- Identified client needs and commercial opportunities through structured market research and competitor analysis which supported a product expansion decision that increased revenue by approximately 20%.
- Built financial models and performance summaries in Excel to evaluate product propositions and assess the commercial impact of new initiatives.

- Managed client relationships and stakeholder communications with professionalism and a strong service ethos to maintain a consistently positive experience for all partners.
- Coordinated end-to-end delivery of commercial initiatives, tracking milestones and producing progress reports that kept all projects on schedule.

FEATURED PROJECTS

Road Accident Severity Prediction (LightGBM + SMOTENC) *2026*

- Built an end-to-end ML pipeline integrating 500k+ UK collision records and 900k+ vehicle datasets, which included data extraction, validation, and feature engineering at scale.
- Performed rigorous EDA and statistical modelling using Python (Pandas, NumPy, Matplotlib, Seaborn) to identify behavioural, environmental, and vehicle-related risk factors.
- Developed and optimised a LightGBM classifier with SMOTENC resampling to address severe class imbalance on highly skewed real-world data.
- Evaluated model robustness with cross-validation, confusion matrices, and macro-F1, and applied SHAP, permutation importance, and PDP for quantitative model explainability and insight communication.

Facial Emotion Recognition – Deep Learning (CNN) *2026*

- Designed and trained a VGG-style CNN in Python (TensorFlow/Keras) to classify seven facial emotion classes across 70k+ images from multiple integrated datasets.
- Implemented label standardisation, stratified sampling, augmentation, and class balancing to ensure statistically reliable, unbiased training data.
- Applied batch normalisation, dropout, and AdamW optimisation to improve model generalization and evaluated performance using accuracy, precision, recall, F1-score, and confusion matrices.

Spatio-Temporal Crime Trend Analysis – Colchester *2025*

- Integrated street-level crime records with multi-year meteorological datasets (2023–2025) in R, which involved data cleaning, validation, and feature engineering for time-series analysis.
- Performed exploratory, temporal, and statistical analysis which included hypothesis testing and correlation modelling to identify seasonal crime trends and quantify environmental variable relationships.
- Communicated findings through structured analytical reports and visualisations to translate complex quantitative outputs into clear, actionable recommendations for non-technical audiences.

EDUCATION

University of Essex – Master of Science in Applied Data Science | **Distinction (88%)** *2025 – 2026*

Liverpool John Moores University – BSc (Hons) Computer Networks | **First Class (86%)** 2023 – 2024

Auston University – Higher Diploma in Infrastructure & Networks | **Distinction** 2022 - 2023

ADDITIONAL INFORMATION

Languages: English (Fluent) | Korean (Proficient) | Burmese (Native)

Right to Work: Available to work in the UK without visa sponsorship
